RSuite STANDARD

OUT-OF-THE-BOX COMPONENT CONTENT MANAGEMENT

Out-of-the-box Deployment

A Versatile SaaS CCMS

Assign & Automate Workflows

Publish into Multiple Formats

RSuite® Standard provides an out-of-the-box deployment platform for managing content and data. RSuite Standard is used for authoring, editorial review and approval, content transformation, and rendering into multiple output formats.

Any organization can benefit from using RSuite Standard CCMS. The versatile SaaS-based software gives users the flexibility, agility, and scalability needed to easily manage high-volumes of documents and data on a component-level.

As a result, organizations experience improved publishing processes and reductions in the volume of authored content, errors and business costs.

RSuite Standard is a powerful solution for organizations looking to scale their publishing operations. It provides an out-of-the-box deployment platform for managing content and data.

SOFTWARE FEATURES

» Create, modify, access, version, link, publish and manage component-level content with out-of-the-box implementation.

» Publish from a single XML source into multiple formats.

» Automate workflows to support content creation, modification and approval processes.

» Protect high-value content through component level role-based access control.

» Use out-of-the-box and industry standard APIs.

» Automate back-ups and disaster recovery with a cloud-based system.

» Versatile SaaS CCMS for clients who want flexibility, agility, scalability, and lower costs.

"

RSuite Standard has enabled us to manage technical documentation related to nine separate products as a single source set of XML content. It provides a great resource for sharing like content across products and has drastically reduced the overall volume of authored content.
