

The cost-effective, easy-to-deploy CSDB for S1000D authoring teams.

Without the heavy complexity and costs of traditional CSDBs, notusCSDB provides all the functionality S1000D projects demand. Built on Contiem's proven CCMS platform, notusCSDB is intuitive, quick to deploy, and designed to streamline aerospace and defence content delivery.

Key Benefits

Faster Setup – Deploy quickly and start projects without IT bottlenecks

Lower Costs – Reduce the expense of running and maintaining a CSDB

Compliance Guaranteed – BREX validation, full version history, and role-based governance

Seamless Publishing – Direct integration with notusBookBuild for compliant PDF and IETP output

Deployment Flexibility – Choose SaaS or on-premises with secure silo separation

Key Features

- Supports all issues of S1000D
- SaaS or on-premises deployment
- Customisable dashboards with secure login
- Workflow tracking
- Project metadata setup
- Bulk import/export with automatic related item management
- Fully integrated with Eclipse S1000D (FrameMaker, Arbortext, oXygen)
- APIs and plug-in support for 3rd party integration

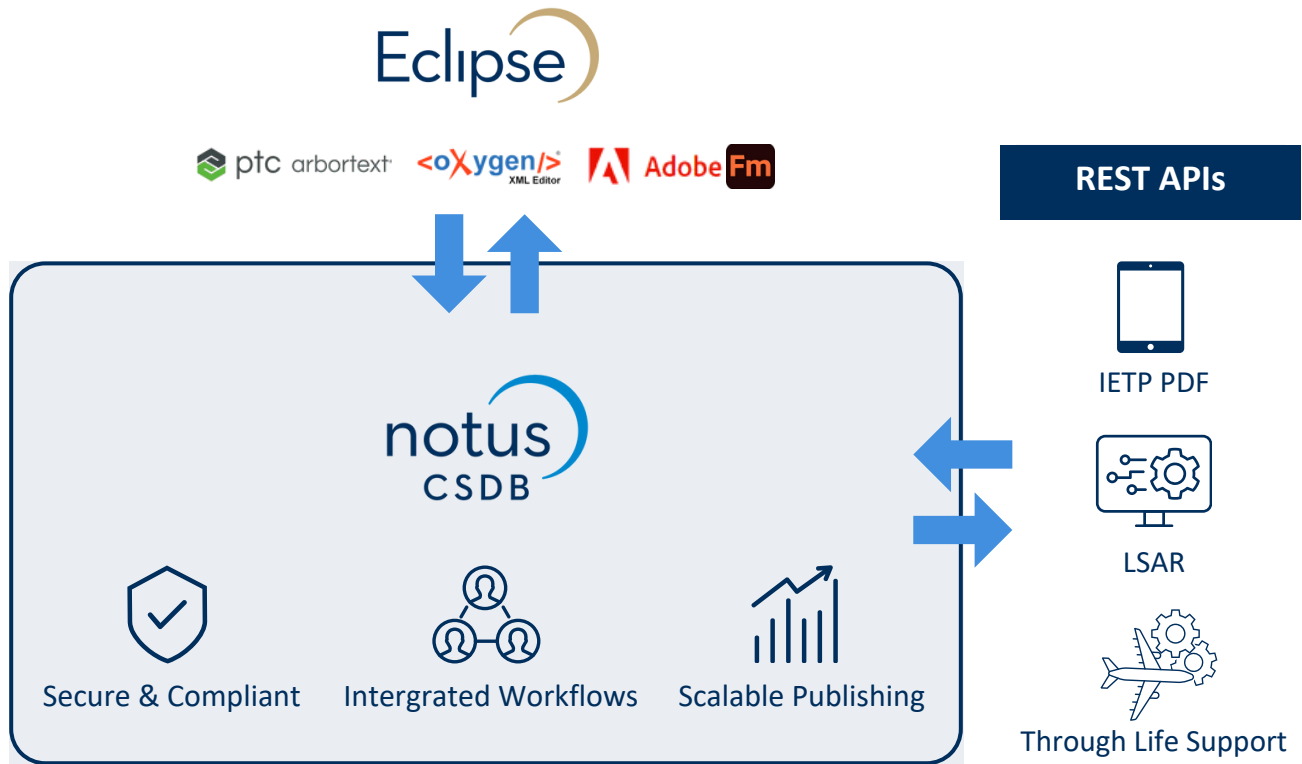

“Steve delivered an excellent course, tailored on the fly to our needs which he assimilated very quickly. It was comprehensive to the point where all attendees felt confident in the Applications’ use after only two days; and having loaded both the current and archive datasets without encountering any issues, proven also a welcome robustness and intuitive interface. The user guide is also very easy to use and relevant. Appreciate your ongoing help in assuring we are able now, to deliver to our customers.”
